

PRODUCT INFORMATION

WALKWAY MATTING

Walkway matting is a natural rubber crumb bonded together to give membrane and insulation protection. It is free from health hazardous ingredients and is ecologically sound. It can therefore be used in or on any type of building.

Walkway matting can be loose laid or adhered with the use of contact adhesive.

It is highly resistant to chemical attack, fungus, insects, and airborne corrosive elements.

INSTALLATION

Roller the contact adhesive onto the substrate, laying the walkway matting into the glue when touch tacky.

Care should be taken to ensure the bond is adequate – laying of the matting should not be in excess of 10 minutes from spreading of the adhesive.

PACKAGING

In roll form 6m x 1.250m x 10m.

TYPICAL PROPERTIES

Basic Material	-	Polyurethane – rubber
Cold resistance	-	up to -120°C
Heat resistance	-	up to 300°C
Colour	-	Black
